

# Geometry induced by representation mappings

Identity activation

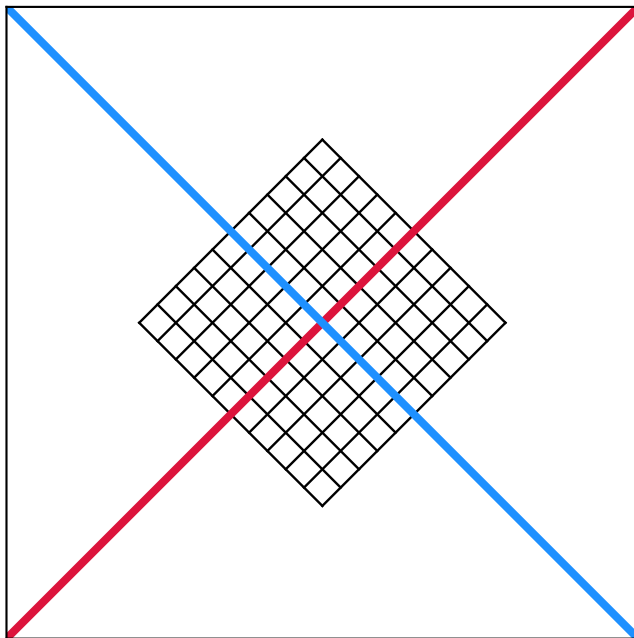

Identity map  
(no geometric change)

$$W = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$\lambda_1 = 1, \lambda_2 = 1$$

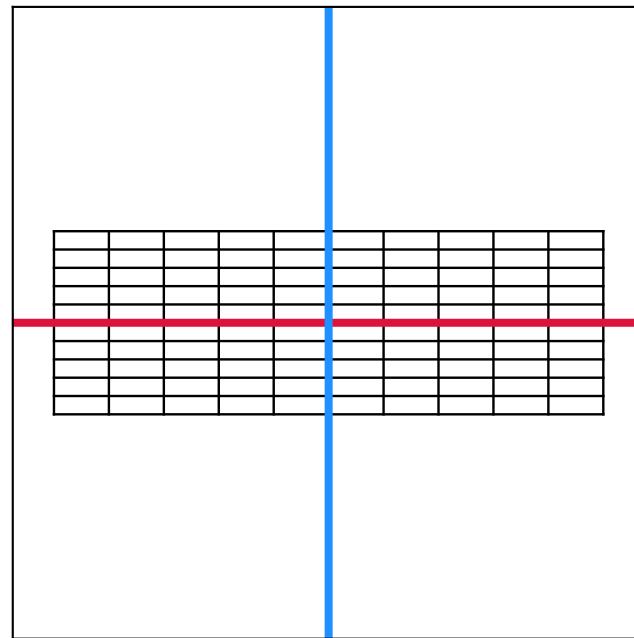

Complex eigenvalues  
(rotation + scale)

$$W = \begin{bmatrix} 1 & -1 \\ 1 & 1 \end{bmatrix}$$

$$\lambda_1 = 1 - 1i, \lambda_2 = 1 + 1i$$

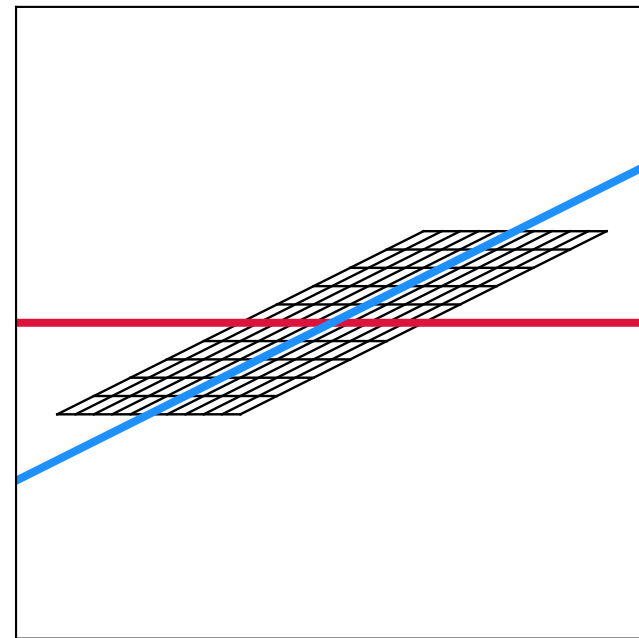

Distinct real eigenvalues  
(anisotropic scaling)

$$W = \begin{bmatrix} 3 & 0 \\ 0 & 1 \end{bmatrix}$$

$$\lambda_1 = 1, \lambda_2 = 3$$

Repeated eigenvalue  
(shear, one eigendirection)

$$W = \begin{bmatrix} 1 & 2 \\ 0 & 1 \end{bmatrix}$$

$$\lambda_1 = 1, \lambda_2 = 1$$
